Winter Semester 2018

Exercise 6

22 March 2018

Assume the following temporal relations between intervals A, B, C and D.

Event A after Event B: $(A > B)$

Event B meets event C: $(B m C)$

Event D is after event A: $(D > A)$

Event D finishes event C: $(D f C)$

- a) What are the possible relations of A to C obtained by transitivity with B?
- b) What are the possible relations of A to C obtained by transitivity with D?
- c) What are the possible relations of A to C after constraint propagation?
